1988

IC MASTER

1 Integrated Circuit Selection Guides, Indexes & Directories

Motorola M68000

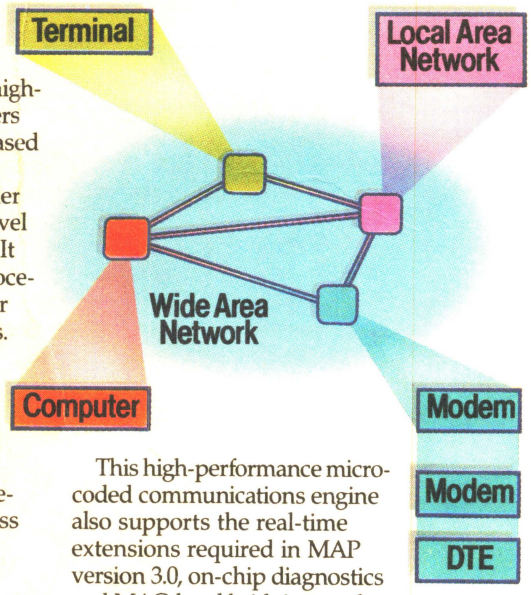
Your high-performance systems require a wide range of microprocessor and peripheral support. The versatile M68000 Family serves those needs with product that's well documented, easy to use, cost effective, easy to get and as varied as your applications.

Versatile solutions for the need to communicate data.

Motorola has developed a family of high-performance communications controllers called Serial Processing Units (SPUs) based on a modular design concept.

The MC68605 X.25 Protocol Controller (XPC) independently generates link-level commands for X.25 and X.75 networks. It expertly terminates the Link Access Procedure Balanced (LAPB) at the full 1.544 or 2.048 data rates provided by T1 facilities. It has passed rigorous Defense Data Network certification tests, and its global acceptance is suggested by use on packet networks all over Europe.

The MC68824 Token Bus Controller (TBC) is the only single-chip VLSI implementation of the IEEE 802.4 Media Access Control (MAC) sublayer defined in the Manufacturing Automation Protocol (MAP) specification.



This high-performance microcoded communications engine also supports the real-time extensions required in MAP version 3.0, on-chip diagnostics and MAC-level bridging, and implements the recommended standar MAC-to-physical serial interface.

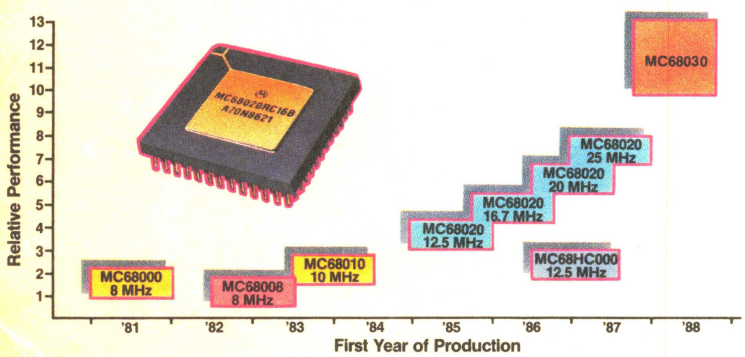
The MC68184 Broadband Interface Controller is, with RF circuitry, the bro band modem required for each node o a broadband MAP network.

In addition to the SPUs, M68000 con munications peripherals include the MC68661 Universal Synchronous Com munications Controller, the MC68652 Multi-Protocol Communications Controller, several DMA circuits and a varie of miscellaneous single- and multifunc tion devices.

The highest-performance 8/16/32-bit MPUs smooth the migration path for your products.

Common internal 32-bit architecture. Object-code software compatibility. Just two of the reasons M68000 Family microprocessors from the 8-bit MC68008 to the 32-bit industry standard MC68020 give your products both the highest performance and the smoothest migration path.

Operating speeds range from 8 MHz for low-cost applications to the industry's fastest general purpose MPUs at 25 MHz.



And, products based on M68000 Family MPUs are the standard for UNIX® operating systems, CAD/CAM workstations, next-generation office automation, multi-user/multi-tasking departmental computers, color graphics as well as for real-time factory automation.

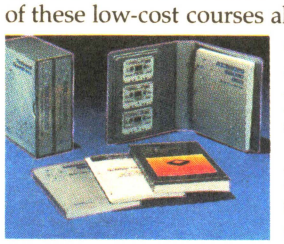
M68000 MPUs are also preferred engines for high-performance artificial intelligence with large linear addressing requirements.

Large, flexible 32-bit register set, large linear address space, powerful yet simple instruction set and flexible addressing modes all add up to the competitive advantage for your M68000 MPU-based product.

UNIX is a registered trademark of AT&T.
HDS-300 is a trademark of Motorola Inc.

Heralded Motorola M68000 Family training courses now available on audio cassettes.

Two Motorola-developed training courses for the MC68000 and MC68020 are now available on audio cassettes. Bo of these low-cost courses also include



course note and appro-priate tech cal literatur

Course MTTA1 is a overview o the MC680 microprocessor: pins and bus operatio addressing modes, instruction set and exception processing including interrup Course completion offers you basic fam iarity with the MC68000.

Course MTTA2 is an introduction to t MC68020: internal architecture, progra ming model, pins and bus operation, addressing modes, instruction set and exception processing.

MTTA1 is $60. MTTA2 is $95. The pri for both courses together is $140.

A new course on the MC68030, MTT is available in mid-September at $95.

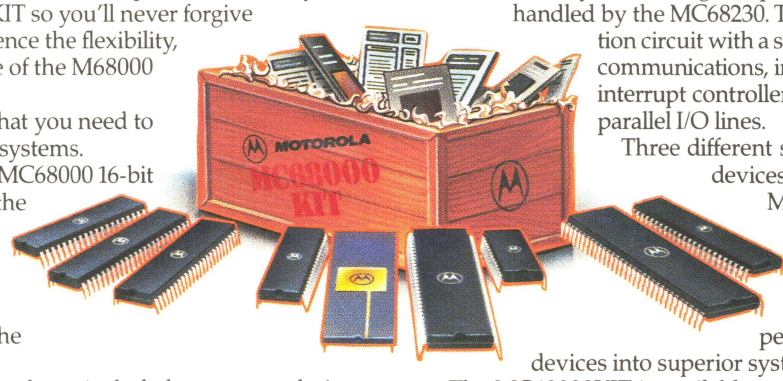
Peripherals Today

Create three different high-performance systems with our $98 design kit.

It's worth a lot more, of course, but we put the irresistibly low $98 price on our MC68000KIT so you'll never forgive yourself if you don't experience the flexibility, versatility and performance of the M68000 Family.

The design kit has just what you need to create three M68000-based systems.

Three MPUs include the MC68000 16-bit general-purpose standard, the high-performance 16-bit virtual memory MC68010 and the cost-effective 8-bit MC68008 with the 32-bit internal architecture of the MC68000.



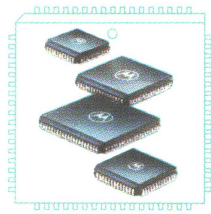
Six flexible family peripherals are included so you can design for your specific applications.

The MC68440 with dual independent DMA channels provides DMA control. System timing and parallel I/O requirements are handled by the MC68230. The MC68901 is a multifunction circuit with a single-channel UART for data communications, in addition to an 8-source interrupt controller, four 8-bit timers and eight parallel I/O lines.

Three different serial communications devices, MC68681, MC68661 and MC68652, complete the parts complement, and the kit also contains the documentation you'll want for converting these high-performance M68000 Family devices into superior systems of your own design.

The MC68000KIT is available only through authorized Motorola distributors. Contact your Motorola distributor to take advantage of this great $98 value.

M68000 Family now offers surface-mount packaging.



As customers develop the ability to utilize surface-mount packages, Motorola is putting the M68000 Family in "J"-leaded, Plastic Leaded Chip Carriers. Several MPUs and over a half-dozen varied peripherals are already available now or later this year. The MC68000, MC68HC000 (HCMOS) and MC68010 are available now in the 68-lead package. The MC68008 is available now in the 52-lead version.

PLCC-packaged family peripherals include the MC68824 and MC68605 SPUs (84-lead), MC68440 and MC68442 DMA devices (68-lead), MC68681/2681 DUART (44-lead), MC68230 Programmable Interface/Timer (52-lead) and the MC68901 Multifunction circuit (52-lead). And this is only the beginning.

Emulate in real time, debug in record time, with the most powerful M68000 Family development system.

Motorola's HDS-300™ hardware/software development station can give you an important edge in slashing development time and moving your product to market when you design in one of the industry's leading M68000 family MPUs.

It simplifies and speeds up debugging and testing of your MPU hardware and software, and in the appropriate configuration can also provide source-level debug for even greater development-time reduction.

Labor-saving features include real-time no wait-state emulation to 25 MHz, system performance analysis and "C" language source-level debugging. Cost efficiency is achieved with a modular approach that permits operation with any of the available emulator modules, including MC68020, MC68010, MC68000 and MC68008.

There are so many more reasons why the HDS-300 development station is the ultimate emulation and analysis tool for systems based on MC68000 Family processors. Discover them.

Literature Packs supply M68000 Family device and application information.

M68000 Family product literature has been assembled into three special, distinct assortments for differing interests. They include brochures, technical summaries and data sheets, benchmark reports, application notes, technical article reprints and other useful pieces.

The M68KPAK is the M68000 Family overview, from chips and software to board- and system-level products.

The M32BITPAK focuses on our top-o'-the-industry 32-bit products, featuring the MC68020, of course.

The M68KCOMPAK is oriented to the extensive M68000 Family communications capabilities.

IMPORTANT NOTICE

Considerable effort has been expended to make the IC MASTER accurate and complete. The IC MASTER cannot, however, assume responsibility for inaccuracies, omissions, manufacturers' claims or their representations. No portion of the IC MASTER may be reproduced in any manner without the written permission of the publisher. © IC MASTER 1988. Copyright 1988 by Hearst Business Communications, Inc. All rights reserved.

HOW TO USE THE IC MASTER

The 1988 edition of the IC MASTER is arranged in three volumes. Each volume serves a specific purpose to help you find the integrated circuit or related product you need. The table of contents on page 1 describes what is in each volume. The table also includes the starting page number for each advertiser.

The IC MASTER is a functional work. You know what you need. The MASTER helps you find it.

Here are typical problems.

Q. What kinds of functions does the MASTER cover?

A. Turn to page 8 in **Volume One.** Here is a complete list of the devices covered. The page and line numbers refer you to the beginning of the Section in which a particular function appears.

Q. Who makes a 16384 x 1 static RAM with an access time of 70ns or faster? What are my technology choices?

A. Pick up Volume 1. Turn to the MEMORY section. The first page of the section tells you where the listings of your device begin. See this under:

RAMs
Bubble
Dynamic
Static

Turn to the first page of static RAMs. In the first column you see the **Organization.** Browse through the pages until you reach the **16384 x 1** listings. Now look through the listings until you find the access time and characteristics you need. Device numbers are shown by manufacturer. The device numbers of advertisers in the 1988 IC MASTER appear in **bold face.** The page number following the device number is where additional information may be found in **Volume Two.** At the extreme right you will see line numbers. These are the specific lines where a device appears.

Q. Which microprocessors are listed in the MASTER? How do I find the microprocessor I need?

A. All commercially available microprocessors are listed in the MASTER. Start with the **microprocessor** listing in the **Master Selection Guide Index** (starts on page 8). Here you will find the various kinds of products you will need listed according to function and bit size. Turn to the various pages shown and then to the advertiser's page where more detail may be available.

Q. Who makes a Dual, Low Offset Voltage OpAmp?

A. This is a **LINEAR** device. Turn to the LINEAR section in Volume One. The first page of the section shows the starting page for each type of device. Turn to the page where **Dual Units** appear. Look down the list for the device you need. Advertisers' devices are listed in **bold face.** Turn to the page in Volume Two where more information may be available.

Q. I need an IC with Music capability. Which Master Selection Guide should I use?

A. Turn to the **Master Selection Guide Index** starting on page 8. Look through the list until you find **Music.** The page numbers for each kind of device are shown.

Q. I plan to use a digital gate array or some other semicustom ASIC in my next project. Where do I find it in the MASTER? Who makes these things?

A. Turn to Volume Three. Turn to the first page of **ASICs/Custom.** Find Gate Arrays and all of the other devices listed here. Now you can find the device you need. After you find the type of device you need, turn to the proper page and find the manufacturer. Advertisers' pages follow the selection guides in Volume Three.

Q. I know the digital IC I need is available. Is it available in a surface mount package?

A. There are two ways to solve this problem. If you know the manufacturer's device number, turn to the Part Number Index in Volume One. Find the basic number and the page number and line where that device is listed in the MASTER. Turn to that page. If the device is available for surface mounting, an open diamond symbol will appear. You can also turn directly to the DIGITAL section and turn to the function of the device you want. The symbol will indicate an SMD is available.

Q. I am looking for an application note on a specific device. Where can I find out if one is currently available?

A. Pick up Volume One. Turn to the Application Note Directory. Here you will find app notes arranged by **function.** Find the function involved and turn to the page where the app note is listed.

Q. We need a device that meets MIL standards. Where do I look in the Master?

A. Turn to the MILITARY Section in Volume One. The Military Device Testing table shows which manufacturers do what kinds of MIL work. Read the instructions on the first page. The cross reference on the following pages tells you which commercial parts have MIL equivalents. This is followed by the MIL to commercial listing. This is followed by a cross reference of DESC drawing numbers to QPL-38510 parts. The next list is a QPL listing based on the latest Defense Electronics Supply Center (DESC) Qualified Product Listing. Additional information is often supplied by the advertisers' pages in Volume Two.

Q. I know the basic part number is 2502 and that's all I know. Where do I look?

A. That's easy in the MASTER. Turn to the Part Number Index. All prefixes and suffixes have been stripped away. Turn to the page where 2502 appears. All manufacturers with that kind of number appear in order along with the page and line number where the device is described.

Q. How many manufacturers claim to make a pin-for-pin and function-for-function equivalent to Motorola MC68000?

A. Turn to the Alternate Source Directory in the back of Volume One. Turn to Motorola. Those manufacturers who claim to be equivalent are listed in order. If you have an MS-DOS computer with a hard drive, you can get the 1988 IC MASTER Alternate Source Directory on a disk. The disk is Clipper compiled from dBaseIII + and is delivered compressed by PKARC. This is the complete list of alternate sources and allows you to add notes such as your own part numbers, prices, sources and the like. Call Hearst (516) 227-1300 and ask for Book Sales for further information.

Q. I looked in the Alternate Source Directory. The part I want an alternate source for isn't listed. Why not?

A. Are you sure you looked through the entire listing for the original manufacturer? Some devices may be listed in odd ways depending on how the MASTER's editors receive the information. Then there is the probability that no other manufacturer makes an exact replacement for your part. It is important for you to understand how the Alternate Source Directory is compiled. Manufacturers supply the information that **their** part is an exact replacement for **another** part. The original manufacturer does **not** tell us his part can be replaced by those listed.

Q. I need an 8/16-bit microcomputer board with an 8MHz clock frequency and a multibus support system. Can I find this in the MASTER?

A. Yes! Pick up Volume Three. Turn to the MICROCOMPUTER BOARD Section. Continue to turn pages until the 8/16 appears in the first column. Then look at all of the available boards to find the boards you can use.

© IC MASTER 1988

Q. I have Valid Logic's "Summary" workstation. Which front end tools are compatible? Can I get one with circuit simulation? What capabilities does it have? Who makes it?

A. Pick up Volume Three. Turn to the Design Automation Section. Check the first page. You will see what is available in the Section. Under Design Tools you will find Front End Tools and Circuit Simulators. Read down for your parameters and across for the vendor.

Q. What do the manufacturers' part numbers mean? I have a Signetics N8X02N. What do all the letters and numbers mean?

A. Look in Volume One for the Part Number Guide. Turn to the Signetics portion. Now you know the **N** prefix means, zero to plus seventy degrees Centigrade. The **N** suffix indicates the package style. The numbers and letters in the middle are the device type. Each manufacturer has a different code system. Understanding the system is a great help in comparing devices.

Q. I found the device I want in the MASTER. What are the pinouts? Where can I get more details? Where can I get a price? What is the delivery time?

A. You have just defined exactly what the IC MASTER does. The MASTER is a guide to tell you which devices are available on a commercial basis. After you know this, the next step is to contact the manufacturer, a local sales office or a distributor.

Q. Where can I find the addresses and telephone numbers of manufacturers, local sales offices and distributors?

A. Pick up Volume Two. Turn to the Manufacturers and Distributors Directory. Read the first page. The information on this page will help you understand why the information in the Directory is so important. It will save time and aggravation.

Q. I just saw a new device advertised in Electronic Products magazine. It isn't listed in the MASTER. Why not? When will it be listed?

A. Preparing the information for the annual IC MASTER is a tremendous undertaking. It requires the cooperation of every single manufacturer. All of the material must be organized, cross referenced and placed in the data base. This data base must be closed off in November in order to meet the publishing date of late January. That is why some devices are not listed. They came on the market too late for the deadline. There are two updates to the annual MASTER. They are called the **IC MASTER UPDATE.** One is issued in the late Spring and the other in early Fall. Be sure to sign up for copies when you get your new IC MASTER. If you are not sure whether or not you have requested the updates, please write to the Circulation Department at the address shown on page 2 of this MASTER. Be sure to indicate which edition of the MASTER you are using.

MASTER SELECTION GUIDE INDEX

(Guide to Product Categories)

When you know the desired function and need specific devices that perform this function, use this Index first. It is organized by functions and by key words. It leads to the beginning of the section containing not only the specified topic but also related devices. The Master Selection Guides that follow in volumes One and Three provide sufficient information to help you make an initial product selection, or to lead you to a group of device numbers and their manufacturers. They enable you to find the products most likely to satisfy your needs for a particular application.

All devices that appear in a selection guide are included in the **Part Number Index.** If you know the part number for a device, by referring to the Part Number Index, you can see the page and line number for data on that device. If the manufacturer of the device has included a data sheet in IC MASTER, the location of this data sheet is also shown in **boldface** type.

PART NUMBER INDEX

This Index shows the page and line where each device appears in the Master Selection Guide.

The Index is arranged in alphanumeric sequence, ignoring the manufacturers' prefixes and suffixes and using the basic part numbers.

The numbers are sequenced by reading the digits from left to right, assuming that letters come before numbers. (As an example, these numbers would appear in the following order: 5301, 531, 54LS01, 54139, 555.)

After each base number, manufacturers' names and full part numbers are listed. This arrangement allows you to find a device whether or not you know the name of the manufacturer or the manufacturer's prefixes. The page references in **BOLD FACE** lead to manufacturers' data pages in Volumes Two and Three.

This is an Index of all parts with identical basic part numbers, regardless of their function. **It is not an Alternate Source Directory.**

PART NUMBER GUIDE

Each IC manufacturer has his own special method of identifying products, usually through a system of logos, device number prefixes and suffixes. This Part Number Guide is arranged alphabetically by manufacturer and describes each company's part number system. JAN nomenclature is also covered.

Manufacturer Device Identification	Part Number Prefix	Part Number Suffix	Example

ADVANCED LINEAR DEVICES, INC.

ALD

ADVANCED LINEAR DEVICES, INC.

Package
- **P** PDIP
- **C** Size-Brazed Ceramic
- **Z** Dice in Waffle Pack
- **D** Cerdip
- **L** Leadless Chip Carrier
- **S** Small Outline
- **M** TO Metal Can

Number of Pins
- **A** 8
- **B** 14
- **C** 16
- **D** 18
- **E** 20
- **F** 22
- **G** 24
- **H** 28
- **I** 36
- **J** 40
- **K** 44
- **L** 48
- **M** 64
- **N** 68

Prefix	Device	Suffix
ALD	555	P A

Type — Package — Number of Pins

ADVANCED MICRO DEVICES

Note: Alternate source devices follow original manufacturer's part number and marking system.

Functional Group
- **21** MOS Memory
- **25** MSI
- **26** Computer Interface
- **27** Bipolar Memory & EPROM
- **28** MOS Memory
- **29** Bipolar Microprocessor
- **57/74** Same as 25
- **60** Analog, bipolar
- **61** Analog, bipolar
- **66** Analog, bipolar
- **79** Telecommunications
- **80** MOS Microprocessor
- **81** MOS and Bipolar Peripherals
- **82** MOS and Bipolar Peripherals
- **90** MOS
- **91** MOS RAM
- **92** MOS
- **93** Bipolar Logic, Memory
- **94** MOS
- **95** MOS Peripherals
- **1004** ECL Memory
- **104** ECL Memory
- **PAL** Program Logic
- **98** EEPROM
- **99** CMOS Memory

Type
- **L** Low Power
- **S** Schottky
- **LS** Low Power Schottky
- **(Blank)** Standard

Package
- **D** Hermetic DIP
- **P** Molded
- **F** Flat
- **X** Dice
- **L** Leadless chip-carrier

Temperature Range
- **C** Commercial
- **M** Military

Prefix	Device	Suffix
AM25	S 05	D M

Functional Group — Type — Device Number — Package — Temperature Range

ANALOG DEVICES

ANALOG DEVICES

- **AD** Analog Devices
- **HA** Hybrid A/D
- **HD** Hybrid D/A

General Information
- **A** Second Generation
- **DI** Dielectrically Isolated
- **Z** Operation on ±12V

Temperature Range
- **A,B,C** Industrial
- **J,K,L,M** Commercial
- **S,T,U** Military

Package
- **D** Hermetically Sealed DIP, ceramic or metal

Monolithic and Hybrid ICs

Prefix	Device	Suffix
AD	7516	AJN

General Information — Temperature — Package

©IC MASTER 1988

Manufacturer Device Identification	Part Number Prefix	Part Number Suffix	Example

ANALOG DEVICES (continued)

E Leadless chip carrier
F Ceramic Flatpack
G Pin grid array
H Metal can, hermetically sealed
M Metal can DIP, hermetically sealed—computer labs
N Plastic DIP
P Plastic leaded chip carrier
Q Cerdip
CHIPS Monolithic chip

Video Hybrid Products

Prefix	Device	Suffix
HAS	1015	EMB

ECL
Package
MIL Screening

AT&T

AT&T

BROOKTREE

Brooktree®

Family
100-199 D/A Converters
200-299 A/D Converters
300-399 Video Amplifiers
400-449 Color Lookup Tables
450-499 RAMDACS

Package
C Ceramic
P Plastic
M Metal
L Leadless chip carrier
G Pin grid array
F Flat package

Temperature Range and Grade
J Low grade
K Middle grade 0°C to 70°C
L High grade
A Low grade
B Middle grade −25°C to +85°C
C High grade
R Low grade
S Middle grade −55°C to +125°C
T High grade
EVM Evaluation module

Prefix	Device	Suffix		
Bt	100	K	C	M

Family
Temperature Range and Grade
Package
High-Rel Screening

BURR-BROWN

(Data Products Division)

BURR-BROWN®

General Information
A Improved Performance
L Latched
Z ±12V supply
HT Wide Temp Range

Temperature
J,K,L 0°C to +70°C
A,B,C −25°C to +85°C
R,S,T,V −55°C to +125°C

Package
M Metal Can, Hermetic
L Leadless Chip carrier
P Molded Plastic
H Ceramic, Hermetic
G General Ceramic

Screening
Q Enhanced Reliability
IQM MIL-STD 883 Screening Methods

Prefix	Device	Suffix
ADC	803	XXXX

General Information
Temperature Range
Package
Screening

(Analog Products Division)

Temperature Range
H,J,K,L 0°C to 70°C
A,B,C −25°C to +85°C
R,S,T,V −55°C to +125°C

Package
M Metal Can, Hermetic
P Plastic
G Ceramic
U Small Outline

Screening
Q Enhanced Reliability
IQM MIL-STD-883 Screening Methods

Prefix	Device	Suffix
OPA	111	XXX

Temperature Range
Package
Screening

(Military Products Division)

Temperature Range
V −55°C to +125°C
U −25°C to + 85°C
W −55°C to +125°C
(None)

Package
M Metal
L Chip Carrier

HiRel Designation
Mil 883/B (None)

Amplifiers/Multipliers ADC s/VFC s:

Prefix	Device	Suffix	
OPA	105	XM	/XXX

Manufacturer Device Identification	Part Number Prefix	Part Number Suffix	Example

BURR-BROWN (continued)

Temperature Range
- **V** −55°C to +125°C
- **U** −25°V to + 85°C
- (None)

Input Coding
- **CBI**
- **COB**

Output
- **V** Voltage
- **I** Current

HiRel Designation
- Mil 883/B (None)

DAC's:

Prefix	Device	Suffix
DAC	87	X-XXX-X/XXX

Range °C
Input Coding
Output
HiRel Designation

CALIFORNIA MICRO DEVICES MICROCIRCUITS DIVISION

Description
- **C** Special
- **G** Standard

Package
- **P** Plastic
- **C** Ceramic
- **D** Cerdip
- **E** Leaded Chip Carrier
- **L** Leadless Chip Carrier

Temperature Range
- **None** 0°C to +70°C
- **I** −40°C to +85°C

Prefix	Device	Suffix
G	65SCXXX	APL12

Speed/Power Variation

CHERRY SEMICONDUCTOR

CHERRY SEMICONDUCTOR

- **CS** Cherry Semiconductor
- **D** Diode Flip Chip
- **N** NPN Flip Chip
- **P** PNP Flip Chip

Package
- **O** Loose Component
- **D** Dual-In-Line
- **P** "Pill," Small Round Package
- **T** TO-Can
- **4** 4 Leads
- **8** 8 Leads

Circuit Style
- **B** National Dual Source
- **S** Signetics Dual Source

INTEL

intel®

Description
- **M** Indicates Military Operating Temperature Range
- **I** Indicates Industrial Grade
- **J** Indicates a JAN qualified device, but is for internal identification purposes only. All JAN devices must be ordered by M38510 part number (Example: M38510/42001 BQB), and will be marked in accordance with MIL-M-38510 specifications.

Package Type
- **B** Hermetic Package, Type B
- **C** Hermetic Package, Type C
- **D** Hermetic Package, Type D
- **G** Hermetic Package, Pin Grid Array
- **I** Crystal Package
- **M** Metal Can Package
- **P** Plastic Package
- **R** Hermetic Package, Leadless Chip Carrier
- **X** Unpackaged Device

Examples:
- **D2147H1** High Speed 4096x1-Bit Static RAM (35ns, 180/30mA)
- **C8080A2** 8080A Microprocessor with 1.5 s cycle time, hermetic package Type C, commercial temperature range
- **MD8080A/B** 8080A Microprocessor, hermetic package Type D, military temperature range. MIL-STD-883 Level B processing*

*On military devices, B suffix indicates MIL-STD-883 Level B processing.

JAN NOMENCLATURE

Prefix
J JAN
Qualified Device
M38510 Military Designation

Device
The "Slash" numbering signifies the specification and specifies the device type. See Military Parts Directory.
Note: The J or JAN prefix is very important. If it is not there it is not a JAN device.

Device Class
A Missiles and manned Spacecraft
B General Military
C Less Critical Military Applications

Case Outline
A 1/4″ × 1/4″ Flat Pack, 14-Pin
B 1/8″ × 1/4″ Flat Pack, 14-Pin
C 1/4″ × 3/4″ Dual-In-Line, 14-Pin
D 1/4″ × 3/8″ Flat Pack, 14-Pin
E 1/4″ × 3/4″ Dual-In-Line, 16-Pin
F 1/4″ × 3/8″ Flat Pack, 16-Pin
G 8-Lead Can
H 1/4″ × 1/4″ Flat Pack, 10-Lead
I 10-Lead Can
J 1/2″ × 1 1/4″ Dual-In-Line, 24-Pin
K 3/8″ × 1/2″ Flat Pack, 24-Pin
L 3/8″ × 1/2″ Flat Pack, 24-Pin
Z 1/4″ × 3/8″ Flat Pack, 24-Pin

Lead Finish
A Kovar or Alloy 42, with Hot Solder Dip
B Kovar or Alloy 42, with Bright Acid Tin Plate
C Kovar or Alloy 42, with Gold Plate

Temperature Ranges
Linear Devices
With proprietary linear circuits, a 1-2-3 numbering system is employed. The 1 denotes a Military temperature range device (−55°C to 125°C), the 2 denotes an Industrial device (−25°C to 85°C), and the 3 denotes a Commercial device (0°C to 70°C). i.e. LM101/LM201/LM301. Exception to this are the LM1800 Series; some hybrid circuits which employ a "C" Suffix; and second-source products which follow the original manufacturer's numbering system.

Micro CMOS

DM7XXX — All other numbers beginning with 7 (besides the "74" shown above) are NSC proprietary products and a 7 here indicates −55°C to 125°C.

DM8XXX — All numbers beginning with 8 denote 0°C to 70°C temperature operation.

Product Family
- **μPB** Bipolar Products
- **μPC** Linear Products
- **μPD** MOS Products

Memory Product Class
- **10** 10K ECL RAM
- **100** 100K ECL RAM
- **21** NMOS Static RAM
- **23** NMOS ROM
- **23C** CMOS ROM
- **27** NMOS EPROM
- **27C** CMOS EPROM
- **4** Bipolar PROM
- **40** NMOS Static RAM
- **41** NMOS Dynamic RAM
- **42** CMOS Dynamic RAM
- **43** MIX-MOS Static RAM
- **44** CMOS Static RAM

Package
- **AK** 32 Pin Ceramic LCC
- **B** Ceramic Flatpack
- **C** Plastic Molded DIP
- **CS** 20 Pin Plastic Shrink DIP (300 mil)
- **CT** 28 Pin Plastic Shrink DIP (400 mil)
- **CU** 40 Pin Plastic Shrink DIP (600 mil)
- **CW** 64 Pin Plastic Shrink DIP (750 mil)
- **CX** 24 Pin Plastic Shrink DIP (600 mil)
- **C-1-8** 40 Pin Plastic DIP 600 mil
- **D** Cerdip or Ceramic DIP
- **DW** 64 Pin Shrink Cerdip with Window
- **D-1-18** 40 Pin Ceramic DIP
- **E** Ceramic Piggyback DIP
- **G** 24 Pin Plastic SO (Small Outline)
- **G2** Plastic Miniflat
- **GR** 54 Pin Plastic Miniflat (Inverted Leads)
- **GF** 54 Pin Plastic Miniflat
- **G-00** 52 Pin Plastic Miniflat
- **G-1B** 64 Pin Plastic Miniflat
- **G-4** 44 Pin Plastic Miniflat
- **G-5** 44 Pin Plastic Leaded Chip Carrier (PLCC)
- **G-6** 44 Pin Plastic Miniflat
- **G-08** 40 Pin Ceramic Piggyback DIP (600 mil)
- **G-12** 64 Pin Plastic Miniflat
- **G-22** 44 Pin Plastic Miniflat
- **G-28** 42 Pin Ceramic Piggyback DIP
- **G-33** 42 Pin Ceramic Piggyback DIP
- **G-38** 42 Pin Ceramic Piggyback DIP
- **G-36** 64 Pin Plastic QUIP
- **K** 22 Pin Ceramic LCC
- **L** 18 Pin Plastic Leadless Chip Carrier
- **LA** 20/26 Pin Plastic SOJ
- **L-5** Plastic Leadless Chip Carrier
- **L-8** Plastic Leadless Chip Carrier
- **R** 132 Pin Ceramic Grid Array
- **R-8** 68 Pin Ceramic Grid Array
- **V** 16 Pin Plastic Zig-Zag Inline

Modules
- **A** SIMM Leaded
- **B** SIMM Socket Mounted
- **C** SIMM Leaded

DN	74LS00

PLESSEY

PLESSEY

(All ICs are marked PLESSEY)

Description
- **MJ** N-Channel MOS
- **ML** MOS Linear w/Gate Protection
- **MN** MNOS Digital
- **MP** MOS Digital
- **MT** MOS Linear (without Gate Protection)
- **MV** CMOS
- **NJ** N-Channel MOS
- **NOM** MNOS Memory Elements and Arrays
- **TAA,TBA,TDA** Alternate Sourced Consumer Devices
- **SL** Bipolar Linear
- **SP** Bipolar Digital

Package
- **CM** Multilead TO-5
- **DC** Dilmon
- **DG** Ceramic Dual-In-Line
- **DP** Plastic Dual-In-Line
- **EP** Power Stud
- **FM** Ten Lead Flatpak
- **GC** Leadless Carrier
- **GM** Fourteen Lead Flatpack
- **KM** TO-3
- **QG** Ceramic Quad-In-Line
- **QP** Plastic Quad-In-Line
- **RP** Power Findip
- **SP** Plastic Single-In-Line

PRECISION MONOLITHICS

Description

- **ADC** Analog-to-Digital Converter
- **AMP** Instrumentation Amplifier
- **BUF** Buffer (Voltage Follower)
- **CMP** Comparator
- **DAC** Digital-to-Analog Converter
- **DMX** De-Multiplexer
- **GAP** General Purpose Analog Processor
- **JAN** Mil-M-38510 Slash Sheet
- **MAT** Matched Transistors
- **MUX** Multiplexer
- **OP** Operational Amplifier
- **PKD** Peak Detector
- **PM** PMI Second Source Product
- **REF** Voltage Reference
- **RPT** PCM Line Repeater
- **SMP** Sample/Hold Amplifier
- **SW** Analog Switch

Package

- **H** 6 lead TO-78
- **J** 8 lead TO-99
- **K** 10 lead TO-100
- **P** Epoxy B DIP
- **Q** 16 lead Ceramic DIP
- **R** 20 lead Ceramic DIP
- **T** 28 lead Ceramic DIP
- **V** 24 lead Ceramic DIP
- **X** 18 lead Ceramic DIP
- **Y** 14 lead Ceramic DIP
- **Z** 8 lead Ceramic DIP

PRO ELECTRON

First Letter

- **T** Analog Circuit
- **U** Mixed Analog/Digital

Second Letter

No special significance.

Third Letter

Temperature Range

- **A** Temp. Range not specified below
- **B** 0°C to +70°C
- **C** −55°C to +125°C
- **D** −25°C to +70°C
- **E** −25°C to +85°C
- **F** −40°C to +85°C
- **G** −55°C to +85°C

Device or Serial Number

Either a 4-digit number assigned by PRO ELECTRON or the serial (even a combination of figures and letters) of an existing type designation which can be extended to a minimum of a 4-digit number by adding zeros in front of it.

Two Letters

First Letter: General Shape

- **C** Cylindrical
- **D** Dual-In-Line (DIL)
- **E** Power DIL (with External Heat Sink)
- **F** Flat (Leads on 2 Sides)
- **G** Flat (Leads on 4 Sides)
- **K** Diamond (TO-3 Family)
- **M** Multiple-In-Line (Except Dual-, Triple-, Quad-In-Line)
- **Q** Quad-In-Line (QUIL)
- **R** Power QUIL (with External Heat Sink)
- **S** Single-In-Line (as TO-127 or TO-220)
- **T** Triple-In-Line

Second Letter: Material

- **C** Metal-Ceramic
- **G** Glass-Ceramic (cerDIP)
- **M** Metal
- **P** Plastic

IS THIS A BORROWED COPY?

Avoid the hassle and order your own personal two-volume set of IC MASTER. It's the surest way to simplify your IC selection efforts.

Only IC MASTER allows you to examine and compare the specifications, relative strengths, and weaknesses of all devices in serious contention for your application. And only IC MASTER brings you actual manufacturers' data sheets, allowing you to make complete and definitive device selections.

You can order IC MASTER simply by charging it to your VISA or MasterCard credit card. To place your order call Marie Botta at (516) 227-1314.

APPLICATION NOTE DIRECTORY

The application notes in this directory can be located by function or device number.

1. To find out what is published by function, locate the closest topics in the index at right, turn to the pages indicated, and scan through the listings.

2. To find all the application notes covering a given device, look up the device in the Part Number Index at the front of this book. The ¶ sign leads to application notes.

The application notes are organized under the following headings: Digital, Microprocessor, Microcomputer Boards, Interface, Linear, Memory, ASIC/Custom, and Packaging. Beneath those headings are functional and applications categories arranged alphabetically. Within each category the notes are arranged in alphabetical sequence by title. When an application note fits under several categories, it is listed in one and cross-referenced by the others. If an application note covers specific devices or shows how certain devices are used, these device numbers are listed in parentheses just below the title.

The length of each application note is indicated in parentheses on the last line; if the note is bound into a book, the last line will show that it is part of a handbook, databook, or catalog.

Once you have determined which application notes you need, contact the manufacturer's sales office or write to the manufacturer. Be sure to give both the title and the application note number. Addresses and phone numbers are listed in the Manufacturers and Distributors Directory.

Arithmetic

A Floating Point Package for The HPC 1
National Semiconductor AN–486 (54pp)

A Four-Cycle Butterfly Arithmetic Architecture 2
TRW/LSI

A Single-Board Floating Point Signal Processor 3
(TDC1022, TDC1033, TDC1042)
TRW LSI TP24 (6pp)

A 22-Bit Floating Point Registered Arithmetic Logic Unit 4
TRW LSI TP–23 (4pp)

AM25S10 Four-Bit Shifter 5
(AM25S10)
Advanced Micro Devices (10pp)

Applications of the TTL/MSI 93S43 4-Bit by 2-Bit Two's Complement Multiplier 6
(93S43)
Fairchild AN–329 (15pp)

Arithmetic Arrays Using Standard COS/MOS Building Blocks 7
(CD4001, CD4008, CD4011, CD4013, CD4019)
RCA ICAN–6600 (6pp)

COS/MOS Rate Multipliers—Versatile Circuits for Synthesizing Digital Functions 8
(CD4089, CD4527)
RCA ICAN–6739 (12pp)

Fast Multipliers Using TTL Read Only Memories
See listing under (Memory) ROMs. (Texas Instruments)

Floating Point Multiplier 9
TRW/LSI

Introducing and Applying the 8x8 CMOS/SOS Multiplier, GP503 10
(GP503)
RCA ICAN–7211 (7pp)

LSI Multipliers Application Notes 11
TRW/LSI

MECL 10,000 Arithmetic Elements MC10179, MC10180, MC10181
See listing under (Digital) High Speed Logic (Motorola).

Multiplier-Accumulator Application Notes 12
TRW/LSI

NBCD Sign and Magnitude Adder/Subtracter 13
(MC14560, MC14561)
Motorola AN–738 (7pp)

CMOS

A COS/MOS PCM Telemetry and Remote Data Acquisition Design 14
(CD4000 Series)
RCA ICAN–6289 (12pp)

A Simplified Approach to Testing CMOS Inverters and Gates 15
Solid State Scientific AN–107 (4pp)

A Typical Data-Gathering & Processing System Using CD4000A-Series COS/MOS Parts 16
(CD4000 Series)
RCA ICAN–6210 (11pp)

A 3 1/2 Digit DVM Using an Integrated Circuit Dual Ramp System
See listing under (Linear) Instrumentation (Motorola)

AC Characteristics of MM54HC/MM74HC High-Speed CMOS 17
(MM54/74HCXXX)
National Semiconductor AN–317 (6pp)

AC Characteristics of the V54/74ACT Interface Family 18
(V54/74ACT)
VTC Data Book and Applications Manual, Section 4 (9pp)

Advanced CMOS Logic Designer's Handbook 19
Texas Instruments SCAA001

Application of CD4016A Quad Bilateral Switch
See 'Transmission and Multiplexing of Analog or Digital Signals Using the CD4016A Quad Bilateral Switch' Under (Interface) Data Transmission. (RCA)

Application of the RCA-CD4093B COS/MOS Schmitt Trigger 20
(CD4093B)
RCA ICAN–6346 (6pp)

Applications of CD40107BE COS/MOS Dual Buffer 21
(CD40107BE)
RCA ICAN–6564

Applications of CMOS Integrated Circuits in Communications Equipment 22
(SCL4000 Series)
Sprague Solid State AN–108 (4pp)

Battery-Powered Digital-Display Clock/Timer and Metering Applications Utilizing the RCA CD4026A and CD4033A Decade Counters 7-Segment Output Types 23
(CD4009, CD4010, CD4026, CD4033)
RCA ICAN–6733 (16pp)

Characterization and Specification of the V54/74ACT Interface Family 24
(V54/74ACT)
VTC Data Book and Applications Manual, Section 6 (9pp)

CMOS Analog Multiplexers and Switches; Applications, Considerations 25
Harris Semiconductor AN–520 (9pp)

CMOS Breathes New Life Into Bit-Slice 26
(IDT49C410)
Integrated Device Technology AN–08 (12pp)

CMOS Expandable Gates 27
(SCL4402A, SCL4412A)
Sprague Solid State AN–102 (3pp)

CMOS/MOS Interfacing Simplified
See listing under (Interface) MOS/Bipolar (RCA)

CMOS/MOS Rate Multipliers—Versatile Circuits for Synthesizing Digital Functions
See listing under (Digital) Arithmetic (RCA)

CMOS Oscillators 28
National CMOS Databook AN–118 (4pp)

CMOS, the Ideal Logic Family 29
National CMOS Databook AN–77 (7pp)

CMOS Wave Shaping and Level Detection 30
Sprague Solid State AN–109 (5pp)

Comparison of MM54HC/MM74HC to 54LS/74LS, 54S/74S and 54ALS/74ALS Logic 31
(MM54/74HCXXX, 54LS/74LSXXX)
National Semiconductor AN–319 (6pp)

Comparison of the V54/74ACT to 54/74LS, 54/74S, and 54/74ALS Interface Families 32
(V54/74ACT, 54/74LS, 54/74S, 54/74ALS)
VTC Data Book and Applications Manual, Section 8 (8pp)

COS/MOS Electrostatic-Discharge Protection Networks 33
(CD4000 Series)
RCA ICAN–6572 (2pp)

IDT Military Products

A major revolution is taking place in the semiconductor industry. High-speed CMOS technology is rapidly displacing older NMOS and bipolar processes as the work horse of the 80's and beyond. Integrated Device Technology, a company totally predicated on and dedicated to implementing high-performance CMOS products, is on the leading edge of this dramatic change.

Over the past five years, IDT has grown into a company with multiple divisions producing a wide range of high-speed CMOS circuits that are, in almost every case, the fastest products of their type available in the industry today. These advanced products are produced with IDT's proprietary CEMOS™ technology, a twin-well, dry-etched, stepper-aligned process utilizing progressively smaller dimensions.

From inception, our product strategy has been to apply the advantages of our CEMOS technology to produce integrated circuit elements required to implement high-performance digital systems. Many of our innovative product designs offer high levels of integration, advanced architectures, higher density packaging and system enhancement features that are establishing tomorrow's industry standards.

IDT is the leading U.S. supplier of high-speed CMOS static RAMs. High-performance logic, digital signal processing (DSP) circuits, MICROSLICE™ bit-slice microprocessor products, data conversion devices and modular subsystem assemblies complement these RAMs to provide high-speed CMOS solutions to a broad range of applications and systems.

IDT offers a full line of high performance, militarized CMOS products which are MIL-STD-883 compliant. In addition, for stringent military environments, IDT has process, manufacturing, and test capabilities to supply both radiation hardened and Class-S processed products.

IDT's goal is to provide cost-effective circuits to create systems which are far superior to previous generations in performance, reliability, weight and size. We are dedicated to maintaining our leadership position as a state-of-the-art IC manufacturer, and will continue to hone our technological edge as well as develop an ever broader range of high-yield, high-performance products. Through these superior products and creative solutions to customer needs, IDT will play an increasingly important role as a major manufacturer in the era of high-speed CMOS.

CEMOS is a trademark of Integrated Device Technology, Inc.

MILITARY PARTS DIRECTORY

This section is divided into three parts: a table of those manufacturers willing to perform MIL-STD-883 screening, a three-way commercial/M38510/DESC drawing cross reference index, and the Qualified Parts List broken down into functions. It not only shows what devices are on the list and which manufacturers supply them, but it also decodes the military slash numbers into manufacturers device numbers.

The Military Device Testing table on the following page shows the manufacturers who screen devices to MIL-STD-883, perform other environmental screening or test radiation hardness. The table also indicates which companies are currently qualified to supply devices on the QPL list. The Military Parts Index provides convenient cross equivalents; DESC drawing numbers; plus indication of which devices are listed in the latest QPL.

The heart of this section is the Military Parts Directory, which is a functional QPL parts list. It is based on the latest Defense Electronics Supply Center Qualified Products List (QPL-38510-XX) at the time of publication. The revision and date of this list are indicated at the bottom of each page. The devices are identified by major functions; within each function the devices are arranged in alphanumeric order.

A complete military part number indicates a three letter suffix signifying the device class and packaging. The definitions of these letters are given in the Part Number Guide under "JAN Nomenclature". The package styles and lead finishes that each manufacturer is qualified to supply can be determined by consulting the official QPL or by contacting the individual manufacturers. Once you have found the names of the companies you need to contact, you can reach them by using the information in the Manufacturers and Distributors Directory.

EXPLANATION:

The "MIL-M-38510" section indicates the IC manufacturers currently providing Q.P.L. ICs. More detailed information on the specific devices is given in the Qualified Products lists which follow.

The "MIL-STD-883 Screening" section lists those manufacturers who are both set up and actively want to screen devices to the levels indicated.

"Other Screening" shows those who report that they want business calling for special military and industrial environmental screening procedures.

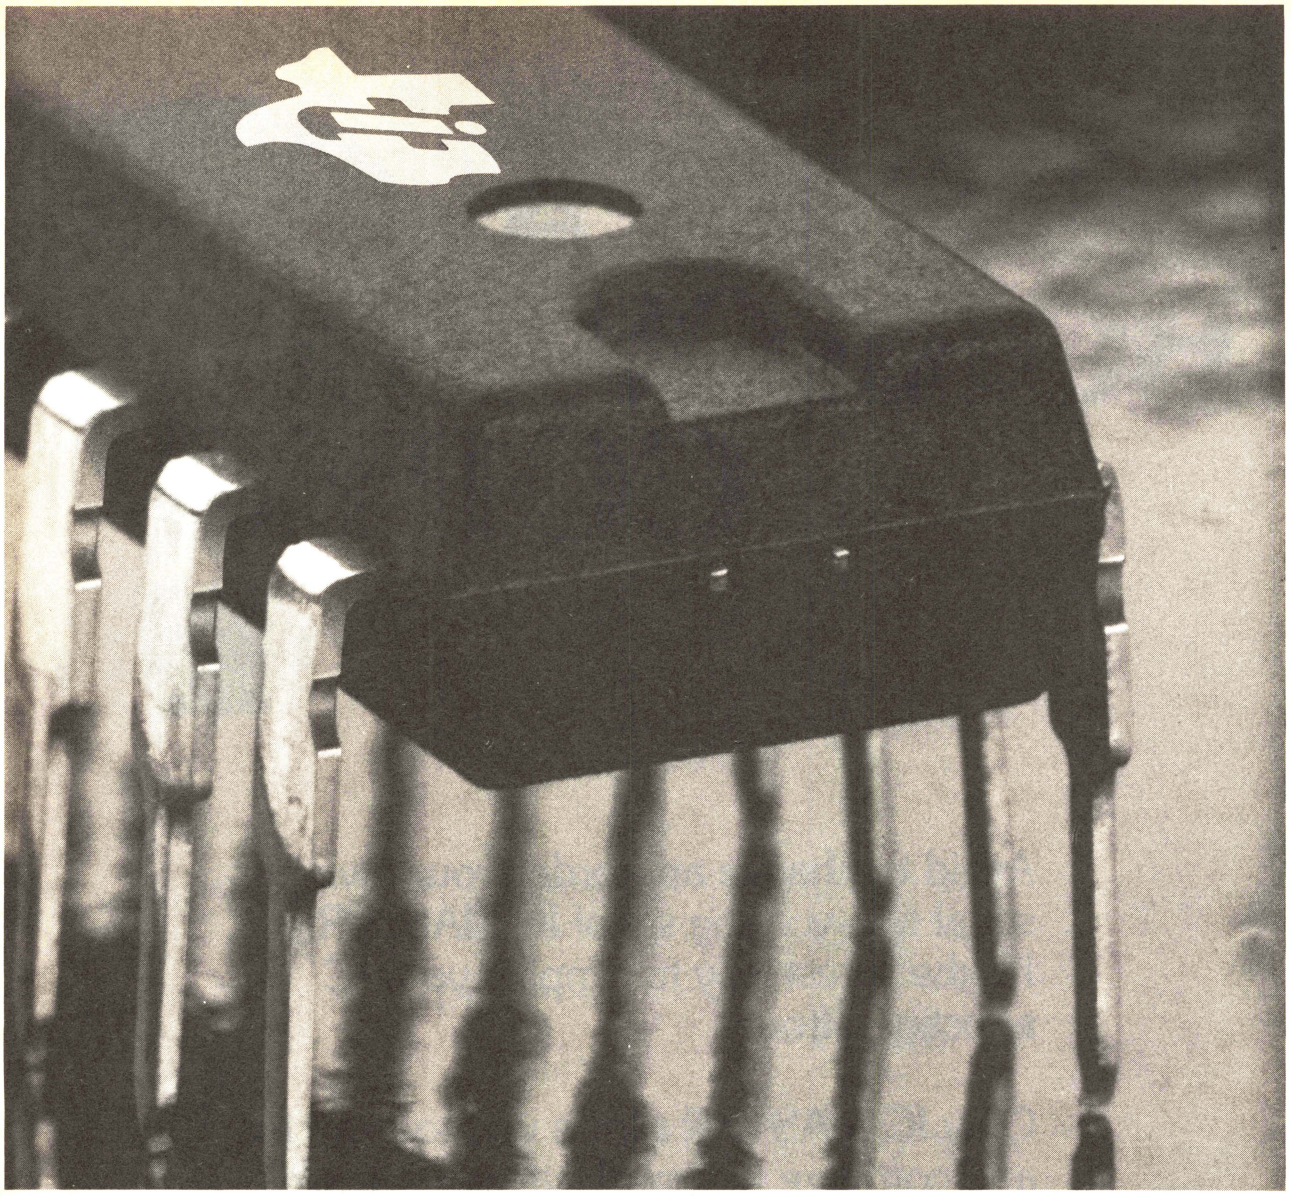
IS THIS A BORROWED COPY?

Avoid the hassle and order your own personal two-volume set of IC MASTER. It's the surest way to simplify your IC selection efforts.

Only IC MASTER allows you to examine and compare the specifications, relative strengths, and weaknesses of all devices in serious contention for your application. And only IC MASTER brings you actual manufacturers' data sheets, allowing you to make complete and definitive device selections.

You can order IC MASTER simply by charging it to your VISA or MasterCard credit card. To place your order call Marie Botta at (516) 227-1314.

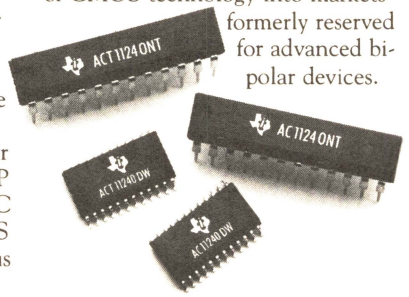


In the emerging world of advanced CMOS, TI has a big idea: EPIC™ ACL.

Presenting EPIC ACL, a broad and expanding family of advanced CMOS logic devices that offer major design advantages.

Consider: Simultaneous switching noise levels 50% lower than conventional end-pin ACLs, and 10% lower than advanced bipolar devices. Speeds comparable to bipolar 74F. Low CMOS power consumption. 24 m/A sink/source currents for high drive capability. And flow through architecture for ease of design. Your choice of DIP or SOIC packaging, as well as AC and ACT options for both CMOS and TTL interface capability. Plus alternate sourcing of the entire family by co-developer Philips/ Signetics.

Those are the big ideas behind EPIC ACL — ideas that will enable you to extend the application of CMOS technology into markets formerly reserved for advanced bipolar devices.



Start some epic ideas of your own. With an ACL family that not only provides bipolar speed and performance, but reliable system-level operation as well. Best of all, it's available now. In quantity. At TI Authorized distributors everywhere.

EPIC ACL. A truly big idea in advanced CMOS logic.

INTRODUCTION TO DIGITAL

Digital devices are listed by major product families: CMOS, ECL, GaAs, or TTL, and within them by functional groups such as arithmetic, buffers and inverters. The adjacent table shows how these families and functional groups are organized. Digital circuits not in the major logic families are listed under the heading Digital-Special.

A separate guide for circuits specifically directed to Digital Signal Processing (DSP) applications is included within the Digital section. Some of these circuits may also be repeated in the Digital families, the Interface, or Microprocessor portions of IC Master.

A few digital devices, such as watch, clock, speech and music circuits, are not covered in the digital section, but are included in the Linear—Consumer guide.
